

Noha Waheed

Front-End Developer | Cairo, Egypt | +201282037762 | nohawaheed.1991@gmail.com | Portfolio: nohawaheed.me | linkedin.com/in/noha-waheed | github.com/nohawaheed

Front-End Developer with experience delivering Angular web applications and launching a Flutter mobile on [google play](https://play.google.com/store/apps/details?id=com.noha.waheed). Proven ability to ship features independently and in remote teams. Skilled in building responsive UIs from Figma, integrating APIs, and optimizing cross-device performance. Built 30+ PRs, collaborated across time zones, and delivered full features under agile workflows. Currently learning React and Next.js to expand frontend depth. Eager to contribute to fast-moving product teams focusing on usability and accessibility. Portfolio showcasing Angular, React, and Flutter projects: nohawaheed.me

EXPERIENCE

TRUEMINDS INNOVATIONS LTD

Front-End Developer Intern (React)

Nigeria, Remote

February 2026–April 2026

- Developed responsive UI components from Figma designs using React.
- Collaborated within a cross-functional team of product managers, designers, and backend developers to build a full Learning Management System (LMS) application from a PRD, following agile workflows and Git-based collaboration.

TIME MACHINE, INC.

Front-End Developer

Japan, Remote

January 2023–January 2024

- Built a message reply feature in an Angular-based chat application to support targeted responses, enhancing overall usability and aligning with intended user interaction patterns, contributing to 100% sprint completion rate.
- Implemented URL preview feature in the Angular chat app to show embedded content (e.g., YouTube, Facebook, Google links); later optimized by a senior developer using RxJS debounceTime, Cutting paid API requests by 60%.
- Collaborated daily with a global team via Slack and Asana, ensuring efficient task tracking and timely feedback.
- Implemented responsive UI layouts based on Figma designs across various device sizes.
- Managed codebase using Git and GitHub; created 30+ pull requests, and resolved conflicts.
- Updated backend endpoints using Nest.js to support new functionality and ensure consistent API behavior.
- Integrated RESTful API endpoints using Angular services and NestJS controllers.

INDEPENDENT DEVELOPER

Personal Project – Tazkira

Cairo, EG

January 2024–Present

- Developed a mobile app in Flutter to help users stay consistent with daily Azkar (Islamic remembrances); available now on [Google Play](https://play.google.com/store/apps/details?id=com.noha.waheed.tazkira).
- Added features like daily reminders with flutter_local_notifications, dark/light mode with SharedPreferences, and fast local storage using ObjectBox.
- Designed and tested layouts across Android devices to ensure clarity and ease of use.
- Built app UI with Material Design widgets and persisted state with Riverpod and ObjectBox DB.
- Completed MVP in under two months using AI tools (e.g., ChatGPT, Copilot, DeepSeek) for code suggestions and debugging.

Customer Support & Data Entry Specialist

- Provided customer support for telecom clients, resolving inquiries and technical issues effectively.
- Handled high-volume data entry at CFI with 98%+ accuracy across internal systems.
- Provided remote customer support via Hsoub's Mostaq platform, ensuring effective communication and timely ticket resolutions in a distributed team setting.

PROJECTS

Space tourism multi-page website using react

[Github Link](#)

[Live Link](#)

Created a multi-page space exploration website with an interactive tab-based navigation system, allowing users to seamlessly toggle between pages and discover new information. Built with React, CSS3, and HTML5 for a responsive and visually engaging experience.

Todo app using reactjs

[Github Link](#)

[Live Link](#)

Developed a modern, interactive to-do application with a sleek dark/light theme toggle and smooth drag-and-drop functionality for effortless task management. Built with React, CSS3, HTML5, and JavaScript, ensuring a responsive and visually engaging user experience.

Angular Trending Movies & TV

[Github Link](#)

[Live Link](#)

Built a responsive web app using Angular routing and TheMovieDB API to display trending movies with a slider and paginated lists. Developed detail pages with video trailers and related information. Added tabs for TV shows and actors, each with dedicated list and detail views.
